Re: Garmin Site Signage & Wayfinding Project Narrative

Dear Mr. Sean Pendley,

The project narrative for the Garmin Site Signage and Wayfinding is to provide this package to assist with visitors, vendors and deliveries to the Garmin Campus. With over 2M square feet of buildings on the campus site wayfinding is important and the message needed on the signs requires some of the signs to be larger than allowed by the current UDO. We are requesting an exception for a few of the signs to be larger than allowed by the current UDO.

The signs not meeting the current UDO are: Entrance Sign E1/02; E2/02; S1/01; SW/04 (4 locations) is 6' tall however the width of the sign takes is slightly outside the allowed 20 square feet per face. These signs are deeper within the Garmin campus and not adjacent to public streets. Entrance Signs E2/01; SW/01; SW/03 with the base is 9' tall. The area of the sign is larger than the 20 square feet allowed as well. There are three of these signs and they are located along the public streets (Mahafie Circle, 151<sup>st</sup> Street and Ridgeview Road. Due to the sign message needed and the visibility required along the streets they are located we can't make the signs any smaller and be effective.

Sincerely,

Dan Zeller, AIA  
Principal
