Design concept

The design uses the line art which is one of my art styles.

The line art is created with the flowing lines (the blue lines) as like connecting the dots (the red circles) as shown in the attached image. The dots mean time, place, experience and people, and the flowing lines connecting the dots express space-time, time flow (the lineage of past, present and future), history, life, and good connections with people and community. It is the main concept of the line art. In addition to that, it expresses beautiful cityscape and positive energy.

Description of the project

The design extends throughout the paintable concrete area except the manhole.

I plan to paint the line art using the water-based paint recommended for durability and environment using the paint roller. And I will repeat painting to improve durability.
